

Jobs and Economic Benefits

The construction and operation of high speed maglev will create a variety of jobs. These jobs will be of many different types including construction, fabrication, operation and associated jobs.

According to the American Public Transportation Association...

“For every \$1 Billion Invested In public transportation infrastructure, 47,500 jobs are created.”

”While transit clearly benefits those who use it, even larger benefits accrue to all citizens in the form of economic development, reduced congestion, more livable communities and cleaner air.”

It is estimated that approximately 12,000 jobs will be needed to design and construct the Pennsylvania High Speed Maglev Project.

The project will create significant jobs in the areas of:

- Precision fabrication and manufacturing
- Station area real estate development
- Intermodal transportation development
- Maglev operations and maintenance

Additionally, other jobs and economic development will result from:

- **Improved Connectivity and Transportation**
- **Virtual Extension of Airport**
- **Land Use Development**
- **Direct and Spin-off Jobs**
- **Employment Mobility**
- **Quality of Life Improvements**
- **High Tech Image of Maglev**
- **Downtown Availability and Revitalization**
- **Other related economic opportunities resulting from implementation of this “leapfrog” transportation system**

Jobs and Economic Benefits To Steel and Other Industries
